

DEMEINE ESTATES

ECO-INITIATIVES

Demeine Estates is proud to represent wineries who invest in sustainable, organic and biodynamic practices that improve grape quality, reduce environmental contamination, and ensure vineyard longevity for future generations.

At Lawrence Wine Estates, farming vineyards organically has been a core philosophy since the 1980s. Herbicides have never entered a majority of our vineyards, resulting in living, healthy soils. Vineyard teams reduce tractor passes with practices including sheep grazing and low-stature cover crops. Additionally, they continue to annually reduce fertilizer usage by spreading compost and cover crop seed every fall to feed our soils, along with reducing pesticide usage by installing spore traps. Water conservation and monitoring this limited resource is critical to their sustainable approach to manage limited water supply and make decisions when irrigation needs to be applied. Sustainable efforts also include changing plastic for rope, installing bird and owl boxes for vertebrates, and managing surrounding environments to promote a healthier ecosystem.

Our French and Italian partners come from generations of winegrowers who have always understood that great wines begin with healthy land. Sustainable, organic, and biodynamic practices are not initiatives but inheritances, shaped by a belief that protecting biodiversity and using natural resources thoughtfully is essential to expressive, enduring wines.

From Europe to the United States, every family in the Demeine Estates portfolio shares this deep respect for their terroirs, which is reflected in the precision, balance, and character found in every bottle.

DEMEINE ESTATES

SUSTAINABLE PRACTICES AND EARTH INITIATIVES (DOMESTIC)

WINERY	ORGANIC CERTIFIED	BIODYNAMIC CERTIFIED	ADDITIONAL CERTIFICATIONS	WATER RECYCLING AND RECLAMATION	VEGAN	ADDITIONAL SUSTAINABLE PRACTICES
